

PulseView

Product Scoping Report

INTRODUCTION:

Modern marketing teams use multiple tools to track campaign performance across channels such as Google Ads, Meta Ads, email marketing platforms, and analytics dashboards.

When teams need to understand current marketing performance, the process often becomes manual and time-consuming. Analysts must gather data from different platforms, compare reports, and create summaries manually before insights can be shared.

This creates several operational challenges:

- Reporting becomes slow
- Insights are inconsistent
- Teams depend heavily on specific individuals
- Decision-making gets delayed

To solve this problem, this report proposes a lightweight internal product called **PulseView**, designed to simplify marketing performance monitoring and help teams identify where they should focus next.

PROBLEM STATEMENT:

Our current reporting process has problems.

Marketing data is over the place on different platforms. This makes analysts do a lot of work by hand:

- collect data on campaigns
- make reports
- compare how different channels are doing,
- Share what they find out.

This process causes issues:

- delays in getting reports
- inconsistent analysis,

- more manual work,
- and we rely too much on experienced team members.

The organisation needs a way to get answers, to:

“How is our marketing doing now and what should we focus on?”

The solution should work with the tools we already use without changing how our team works.

PROPOSED SOLUTION

PulseView is a tool that helps us see what is going on with our marketing campaigns. It takes all the information from marketing platforms and puts it in one easy to use dashboard.

Of showing us too much information and complicated numbers PulseView shows us what really matters. This includes

- performance visibility,
- campaign health monitoring,
- trend tracking,
- and actionable recommendations. .

The people who made PulseView wanted to make something that's easy to use and helps us make decisions quickly.

The main reason we have PulseView is to help teams find out

- high-performing channels,
- underperforming campaigns,
- and priority focus areas.

TARGET USERS

Primary Users

Marketing Analysts: Their task is to keep track of campaign performance and provide reports.

Account Managers: They need immediate performance information before meeting their clients.

Secondary Users

Clients/Business Managers: They require summary marketing information without going through detailed dashboards.

USER GOALS

The users must be able to:

- See marketing performance on all channels within one report
- Recognize which campaigns are good and bad easily
- Save time from doing manual reporting tasks
- Become more efficient at monitoring their campaigns
- Make quicker decisions when it comes to marketing
- Determine which marketing budget needs to be prioritized

PRODUCT FEATURES

1. Unified Marketing Overview

Displays:

- Spend
- Clicks
- Conversions
- ROI
- Engagement Rate

across multiple platforms in a single dashboard.

2. Campaign Health Monitoring

Each campaign receives a status:

- Healthy
- Warning
- Critical

based on performance conditions.

3. Focus Recommendations

The system provides simple recommendations such as:

“Increase focus on Instagram campaigns”

“Google Ads performance needs optimisation”

4. Trend Analysis

Users can compare:

- current week performance,
- previous week performance,
- and campaign growth trends.

WORKFLOW DIAGRAM

Marketing Platforms

(Google Ads, Meta Ads, Email Tools)

Data Collection Layer

Metrics Processing Engine

Insight Recommendation Layer

PulseView Dashboard

Marketing Teams / Clients

DATA SOURCES

PulseView integrates with existing marketing tools such as:

- Google Ads
- Meta Ads
- Google Analytics
- Email Marketing Platforms

PulseView is developed to complement the work alongside the company's existing ecosystem instead of replacing current workflows.

SCOPE OF VERSION 1

Features Included in V1

The first version focuses only on solving the core business problem.

Included:

- V1 has a performance dashboard
- V1 also has campaign health monitoring
- V1 does trend tracking
- V1 includes a simple recommendation engine
- V1 provides multi-channel visibility

OUT OF SCOPE FEATURES

Features Not, in V1

These are features we are not including:

- AI chatbot assistant
- Predictive forecasting
- Real-time streaming analytics
- Custom dashboard builders
- Automated media buying
- Complex user role systems

Why These Features Are Not Included

The focus of V1 should be on:

- simplicity,
- reliability,
- usability, and
- fast deployment.

An MVP which is more focused is more adoptable and manageable than a complex one.

TRUST & RELIABILITY

It is easier for users to trust the system if:

- metrics are standardised,
- reports are consistent,
- recommendations are clear, and
- data updates are reliable.

PulseView prefers clarity and explainability over AI-generated outputs.

SUCCESS METRICS

The product will be considered successful if it:

- reduces manual reporting time,
- improves reporting consistency,
- helps teams identify issues faster,
- and improves marketing decision-making efficiency.

FUTURE SCOPE

Future versions may include:

- AI-generated insights
- Automated alerts
- Forecasting models
- Budget optimisation suggestions
- Slack/email notifications
- Client-facing dashboards

These features purposefully delayed till the workflow becomes stable.

CONCLUSION

PulseView is a tool that helps people who do marketing. It makes it easy to see how their campaigns are doing. It saves them time because they do not have to make reports by hand.

PulseView does not try to be an complicated tool that does everything. It just gives people the information they need to make decisions about their marketing.

The thing that is good, about PulseView is that it is easy to use and it works well with what the company's already doing. PulseView is also a tool that can grow with the company.
